

# Engineers Without Borders UBC Sponsorship Package

---

## I. About the EWB UBC Community

The Engineers Without Borders University of British Columbia Chapter is a launching pad for ideas to foster a new generation of critical thinkers focused on alleviating poverty and abolishing inequality. We promote a culture of collaboration, and demonstrate our values by changing the world through the ventures we operate and the outcome areas we support. EWB UBC is facilitating connections amongst UBC community members and introducing them to new perspectives, thus fostering global change makers.

EWB UBC has a ‘venture’ structure, with each sub-team’s focus on a different subset of initiatives.

### A. Youth Venture

Youth Venture strives to build lasting connections with youth in the Greater Vancouver area and introduce high school students to the field of engineering. In particular, Youth Venture promotes students to think critically about current issues on both a local and global level. To achieve the goals of our venture, we plan to develop informative workshops for elementary schools, help high school students with their transition to university, and host design competitions based on real-world issues.

### B. Engi-You Wellness

The purpose of Engi-YOU Wellness is to promote health and wellness within the student body by providing actionable tools and strategies to students undergoing personal and academic turmoil. Our aim is to assist students in addressing their challenges and provide a close-knit community and support system through action planning and stress management. Through our program, students are able to find a voice, a family, and feel integrated within the community.

### C. Smoke Free Homes

Smoke Free Homes has the goal of tackling socio-economic, environmental and health issues in rural Guatemala. Specifically, the project consists of providing Eco-Stoves for women and families that will enable them to enjoy a better quality of life by reducing expenses, providing safety and removing toxic chemicals from their homes. The project also plans to incorporate engineering design to improve the current model in order to make the stove more efficient and help tackle more problems faced by Guatemalans.

## II. Interested in supporting EWB UBC's mission?

As an interdisciplinary team of students working on a myriad of initiatives outside the typical hyper-technical work that engineering students normally pursue, EWB UBC would value your support in any upcoming projects. We would appreciate any generous monetary donation you may have towards our goals and venture initiatives. To maintain our relationship, we offer to feature information of our sponsors and mentors on our website, social media accounts and all projects.

### A. Sponsorship Levels

Sponsorship Level	Platinum \$2000 +	Gold \$1500	Silver \$1000	Bronze \$500
